

Technology used:

MySQL

<https://dev.mysql.com/>

What it accomplishes:

- A. Provide a database to store and update post information

How it accomplishes the above:

- A. We store our information in a table, which is created through [sql_table.cc](#). Inserting and updating of table rows are handled through [sql_insert.cc](#) and [sql_update.cc](#) respectively.

Licenses / TOS:

MySQL is licensed under the GNU General Public License, version 2.

As long as all twelve terms and conditions for copying, distribution and modification of the GPLv2 are met then MySQL is free to use.

For our project, all will be met and maintained.
